CREATE EXCEPTIONAL DESIGN FOR EVERY DEVICE

The pixel-perfect web is dead. The days of positioning elements on a web page and expecting them to always display exactly how we wanted are a distant memory; we now cope with the constant barrage of new and varied devices that our designs need to look fantastic on. Responsive web design is no longer a nice-to-have bonus feature, it's an expected must-have.

This book aims to get you started understanding, and using, the suite of CSS and HTML tools available for responding to this new world of devices. Offering practical guidelines, with plenty of detailed examples, this book covers:

- Use the responsive building blocks that help your pages adapt
- Develop responsive grids to make your layouts work on any device
- Add great-looking responsive text to your designs
- Use responsive image and video that will work on any device
- Respond to user context: orientation, ambient light, local time, and more

YOUR AUTHOR

CHRIS WARD

Chris Ward explains cool tech to the World. He's a technical writer and blogger. He has crazy projects in progress and will speak to anyone who listens.

SITEPOINT BOOKS
